OBJECTIVE

Experienced DevOps Engineer with more than three years of proficiency in the design, deployment, and refinement of automated deployment pipelines customized for web-based applications. Demonstrates expertise in administering Azure cloud environments, coupled with a proven track record of constructing and enhancing cloud infrastructures across both AWS and Azure platforms. Skilled in fine-tuning software builds and deployments through a diverse toolkit, encompassing Azure DevOps, GitHub Actions, GitLab, Ansible, Terraform, Kubernetes, and Docker.

TECHNICAL SKILLS

Cloud Platforms	Azure, AWS
Configuration Management Tools	Ansible, Terraform, ARM Templates
Container Orchestration Tools	Kubernetes, Docker, Helm, K9s
CI/CD Tools	Azure DevOps, GitLab, GitHub Actions, Argo CD, Flux CD, Jenkins
Build Repository Tools	ACR, ECR, JFrog
Version Control Tools	GitHub, Azure Repos, Bitbucket
API Management Tools	Azure API Management
Secret Management Tools	Azure Key Vault
Load Balancer	Azure Application Gateway, Azure Load Balancer, Nginx
Logging and Monitoring	Azure Application Insights, Azure Monitor, Elastic search
Project Issue Tracker	Jira, ServiceNow, Azure Boards
Languages/Scripts	Python, Bash, SQL, Jinja
Framework	FastAPI, Django
Web Technologies	HTML, YAML, JSON
Scanning Tools	SonarQube, Snyk, Trivy, Checkov, Terratest, OWASP ZAP, Selenium Testing
Operating Systems	AWS EC2, Ubuntu, Linux
Other Tools	Azure Data Factory, Azure Databricks, Azure App Services, Azure Blob Storage

EXPERIENCE

DevOps Engineer

Saxo Bank

10/2024 - Present

Gurugram

- Engineered Release pipelines for windows services and kubernetes services with Azure DevOps, scheduling and automating deployment in weekly LSU(Live Service Upgrade) achieving 40% faster deployment times and reducing manual errors by 60%.
- Worked alongside cross-functional teams within the organization to create comprehensive DevOps processes from start to finish. This involved designing pipelines, deploying applications in Kubernetes, and seamlessly incorporating security tools.
- Troubleshoot environment errors, identify the service that causes the software problem, and attempt to resolve it. If unable to fix the error, escalate the issue to the developer.
- Manage WLCs client environments that use our test environment to evaluate the Saxo Bank-provided trading platform and promptly resolve any issues they report.

DevOps Engineer

Unisys

07/2022 - 09/2024

Gurugram

- Developed and implemented a comprehensive Ansible playbook automating end-to-end Azure DevOps CI/CD pipeline tasks including service connections, extensions, pipeline setup, execution, release pipeline configuration, and project creation; slashed deployment time by 50%
- While working as a DevOps Engineer on a client project, I created an Azure DevOps data pipeline for Azure Data Factory and Azure Databricks for resources that do not have an external network access.
- Engineered Infrastructure as Code (IAC) pipelines for Azure Infrastructure with Azure DevOps and GitLab, utilizing Terraform Cloud, achieving 40% faster deployment times and reducing manual errors by 60%.
- Worked alongside cross-functional teams within the organization to create comprehensive DevOps processes from start to finish. This involved designing pipelines, deploying applications in Kubernetes, and seamlessly incorporating security tools.
- Utilization of Ansible and Jinja Templating to handle configurations for AKS infrastructure. In addition, monitoring tools were implemented within AKS as part of the process.
- Implemented a streamlined pipeline that integrates SonarQube, Snyk, Aqua Trivy, Checkov, Grype, Invicti, OWASP ZAP, Selenium tests, unit tests, Infracost, Terralint, Terratest, and Zscaler for end-to-end code quality, security, compliance, and infrastructure management.

Technical Intern

10/2021 - 06/2022

Unisys

Bangalore

- Designed and implemented a robust CI/CD pipeline using Azure DevOps and Jenkins, seamlessly supporting various programming languages such as Python, Java, and JavaScript, for organization-wide utilization.
- Utilized AKS for application deployment and integrated Prometheus and Grafana to monitor the application effectively.
- Implemented Infrastructure as Code using Terraform and Ansible, resulting in improved scalability and reliability.

EDUCATION

Bachelor of Engineering, Chitkara University

2018 - 2022 Punjab

Computer Science Engineering — GPA: **9.3/10**
